♦ The hepatitis A and polio vaccines are not included in this table. The hepatitis A vaccine is available for Indigenous adults that are 18 years of age and other eligible individuals. The polio vaccine is only recommended for unimmunized adults who are at risk of exposure to polio virus. For more information see the BC Immunization Manual, [Part 4 – Biological Products](#).

¶ Pregnant people should receive 1 dose of Tdap in every pregnancy, ideally between 27-32 weeks.

‡ Two doses of MMR vaccine are recommended for all adults born in 1970 or later.

* For more information on vaccine eligibility see the BC Immunization Manual.
